Function Description

Input and output scaling capability. Working of the analogue outputs (y) versus input variables (x)

Figure A

The sign of measured quantity and output quantity remains the same. The output quantity is proportional to the measured quantity.

Figure C

The sign of measured quantity and output quantity remains the same. With the measured quantity being zero, the output quantity already has the value $Y_1 = 0.2 Y_2$. Live zero output.

Figure B

The sign of measured quantity and output quantity remains the same. On the range $X_0 \dots X_1$, the output quantity is zero. The range $X_1 \dots X_2$ is delineated on the entire output range $Y_0 = Y_1 \dots Y_2$ and thus presented in strongly expanded form.

Figure D

The sign of the measured quantity changes but that of the output quantity remains the same. The output quantity steadily increases from value X_1 to value X_2 of the measured quantity.
